

HACKATHON · BUILD ON ALIEN

Open science, streamed to your agents.

Gemma 4 × Alien open-science infrastructure

€2,000 prize

€2,000 prize

THE CHALLENGE

Take **Gemma 4** and Alien open-science tooling, and build the **coolest AI science project** in the room.

Judged live · €2,000 for the best build

WHAT YOU GET

Your toolbox

01

Open-science MCPs

600M+ research products and full-text preprints — hosted, zero setup.

02

The Alien backend

Add your own sources, use our RAG engine, and build agentic workflows.

03

Claude plugins

One marketplace of skills that drive the whole platform for you.

04

Live demos

A working OpenAIRE research agent you can try in one scan.

PUBLISHED DATA · ZERO SETUP

Three MCPs, live now

OpenAIRE

The research graph: papers, citations, authors, and projects.

openaire.mcp.alien.club/mcp

bioRxiv

Full-text biology preprints — the whole paper, not the abstract.

biorxiv.mcp.alien.club/mcp

medRxiv

Full-text medical preprints, streamed the same way.

medrxiv.mcp.alien.club/mcp

Bundled in the openscience plugin — inference only, never copied, never stored.

THE DATA, BY THE NUMBERS

600M+

research products in
the OpenAIRE graph

**Full
text**

every bioRxiv & medRxiv
preprint — not just
abstracts

0 setup

endpoints hosted and
bundled in the plugin

GO BEYOND THE PUBLISHED DATA

The Alien backend

`alien-backend.mcp.alien.club/mcp`

Add data sources

Ingest documents, or wrap any external API as callable MCP tools.

RAG engine

Retrieval over your ingested docs, grounded and sourced, out of the box.

Agentic workflows

Compose nodes into agents and run them via an OpenAI-compatible API.

Authenticated with your own `oat_` token – every call acts as you.

THE DEFAULT MCP

Metamorph — one MCP that reshapes itself

`mcp.alien.club`

```
// one endpoint · live config
+ add openaire
+ add biorxiv
+ add my-lab-pdfs
- drop biorxiv

// reshaped mid-conversation
```

Dynamic sources

Add or remove data sources on the fly — no redeploy, no new endpoint.

Programmatic or agentic

Drive it from code, or let the agent reshape its own toolset mid-task.

Powers the main demo

This is what runs `demo.alien.club` — the agent wires up what it needs.

ONE MARKETPLACE

Plug in, then build

```
// add the marketplace, then install
/plugin marketplace add the-alien-club/claude-marketplace
/plugin install openscience@alien
/plugin install platform-basics@alien
/plugin install workflow-engine@alien
/reload-plugins
```

openscience

Works out of the box — the three research MCPs.

platform-basics

Ingest data, wrap APIs, publish & price sources.

workflow-engine

Compose and run agentic workflows.

recipes

End-to-end cookbooks: RAG, API-to-agent, multi-source research.

ENDPOINTS

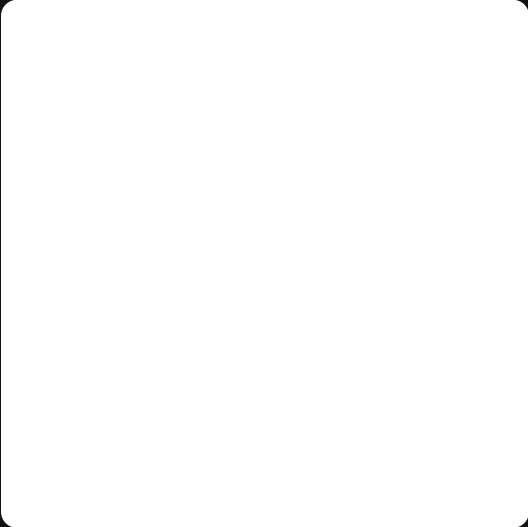

Everything you need to start

PUBLISHED · bundled in openscience

OpenAIRE	<code>openaire.mcp.alien.club/mcp</code>
bioRxiv	<code>biorxiv.mcp.alien.club/mcp</code>
medRxiv	<code>medrxiv.mcp.alien.club/mcp</code>

BUILD ON ALIEN · uses your token

Metamorph · default	<code>mcp.alien.club</code>

New demo

The rebuilt OpenAIRE
research agent.

`openaire.demo.alien.club`

COMPARE

Old demo

The original, still live for
reference.

`demo.alien.club/openaire`

Ideas to steal

01

Literature-review agent

Gemma 4 over OpenAIRE: map a field's citation graph, surface the key papers, summarize the frontier.

02

Preprint radar

Watch bioRxiv & medRxiv for a topic, cluster new findings, flag what contradicts the consensus.

03

Bring-your-own-source

Ingest a lab's PDFs via the backend, then RAG + OpenAIRE for a grounded research copilot.

What makes it cool

-
- | | | |
|----|-----------------------|--|
| 01 | Real science | Grounded in real papers, real citations, real preprints. |
| 02 | Gemma 4 thinks | The model is the engine; the Alien data is the fuel. |
| 03 | Agentic | It does something — takes action, not just answers. |
| 04 | Sourced | Every claim traceable to where it came from. |
